OBJECTIVE

B.Tech Computer Science graduate (CGPA 8.44, JNTU Pulivendula) focused on applying Python, Generative AI, and Machine Learning to practical business challenges. Combines knowledge of LLMs, prompt engineering, tool calling, and data analytics to build intelligent applications that automate workflows and generate actionable insights. Seeking to contribute to AI engineering initiatives through scalable, reliable, and data-driven solutions.

TECHNICAL SKILLS

- **Programming:** Python, OOP
- **Agentic AI**: LangGraph, LangChain, Agent Orchestration, Stateful Workflows, Tool Calling
- **ML & AI:** ML, DL, CNN, RNN, NLP, Gen AI, RAG, LLM's Transformers
- **Advance** : Prompt Engineering, Embeddings, Vector Databases (FAISS),MCP
- **Data Science** : Data Preprocessing, EDA, Feature Engineering, Model Building, Model Evaluation
- **Automation & Web:** Selenium Web-driver, Web Scraping, Web Automation,AI Workflow
- **Additional:** FastAPI, Streamlit., MySQL, SQLAlchemy

PROJECTS

Vendor News Sentiment Monitoring System

Python, Selenium, NLP, Streamlit, Supabase

- Extracted vendor-specific news links from Google Search results and scraped full article content from each link, building a repeatable daily ingestion pipeline.
- Automated real-time news extraction for vendors using Selenium WebDriver, then applied Sentence Transformer embeddings to filter scraped content for topic relevance, removing irrelevant articles before downstream processing.
- Built an NLP sentiment analysis pipeline using VADER to classify news as positive, negative, or neutral, filtering and storing only finance-related news in a Supabase cloud database.

Liver Cirrhosis Prediction System

Python,EDA,KNN,ML,Pandas,Sklearn

- Developed a predictive model to identify the risk of liver cirrhosis using medical feature patterns.
- Applied K-NearestNeighbors (KNN-86.32-85.82) for classificationandoptimizedmodelaccuracyusingfeaturescaling..

AI-Powered Data Analysis Agent

Python,LangGraph, LangChain, Pandas, AST, Streamlit

- Built a stateful AI agent that converts natural-language queries and datasets into Python analysis code, visualizations, and analytical insights.
- Implemented LLM-based code generation, AST-based code verification, and Streamlit integration to validate and execute analysis workflows and display results dynamically.

TRAINING AND CERTIFICATIONS

Analytics Intern – Larsen & Toubro Construction, Chennai *Jan 2026 – Apr 2026*

- Worked with the Analytics Department (CRR) on data-driven automation, building an end-to-end vendor news sentiment monitoring system from scraping through to dashboard delivery.
- Hands-on exposure to production-style data pipelines: web automation, NLP preprocessing, cloud database design in Supabase (PostgreSQL), and stakeholder-facing Streamlit reporting.

AI & ML Internship – Smart Bridge

- Structured training in machine learning fundamentals, covering regression models and applied model building in Python with Sklearn.

Data Scientist Training – Palle Technologies, Bangalore

- Structured training in machine learning, deep learning, gen ai, rag,agentic ai.
- Hands-on project: Build an rag system on tcs annual data using langchain,vector DB,embedings.

EDUCATION

B.Tech – Computer Science & Engineering, JNTU Pulivendula

CGPA: 8.44 / 10 *2022 – 2026*

ACHIEVEMENTS & ACTIVITIES

- **Agentathon Hackathon** – participated in the Google Developer Group, Hyderabad hackathon, building an agent-based solution under time constraints in a team setting.
- **NPTEL Certifications** – Application of Forecasting, Regression & Time Series Models, Machine Learning, Introduction to LLMs, and Programming, Data Structures & Algorithms using Python.
- **LeetCode** – Active problem solver practising data structures and algorithms to strengthen core programming and optimization skills.
